PROFILE

I'm AFLAH TK, a B.Tech graduate in Computer Science from Edathanattukara, Palakkad. I'm passionate about full stack web development and have hands on experience with the MERN stack. I enjoy building user friendly applications that solve real problems. As a fresher, I'm excited to start my professional journey and take on new challenges. I'm comfortable working with unfamiliar tools and technologies because most of what I've learned has come from building projects, exploring solutions, and learning through experience.

RECENT WORKS

incognitalk

node.js, express.js, mongodb, ejs

I built IncogniTalk as an anonymous posting platform where users share incidents or thoughts without creating an account. I handled backend routing with Express, stored posts in MongoDB, and rendered them using EJS in a masonry layout. This project helped me learn database integration, server side rendering, and managing full stack data flow while building a clean and responsive interface.

solarguard

node.js, express.js, ejs

I built SolarGuard as a real time UV and sun information dashboard using OpenUV API. I handled API requests with Express and processed data to display UV index, ozone levels, and sun timings using EJS. This project helped me learn API integration, data processing, and dynamic rendering, while improving my ability to build responsive interfaces and work with real time environmental data in a full stack setup.

elonsfortune

html, css, javascript, bootstrap

I built Elons Fortune as an interactive web app where users spend a virtual money on luxury items. I used JavaScript to handle real time balance updates, percentage tracking, and user interactions. This project helped me improve my skills in DOM manipulation, event handling, and building responsive interfaces using Bootstrap, while also strengthening my understanding of front end logic and dynamic UI updates.

EasyInvite

node.js, express.js, mongodb, ejs

I built EasyInvite as a full stack web app where couples generate elegant, shareable wedding invitations in seconds. I handled backend routing with Express, stored invite data in MongoDB, and rendered dynamic pages using EJS. I used JavaScript to manage form handling, link generation, and UI interactions while building a responsive interface with clean CSS. This project improved my skills in full stack data flow, dynamic rendering, and designing user focused experiences.

TECHNICAL SKILLS

- **Programming Languages:** JavaScript, C
- **Web Development:** MERN Stack
- **Tools & Platforms:** Git, GitHub, Postman
- **Cybersecurity Fundamentals**
- **Cloud & Deployment:** Render, Vercel
- **Networking & Operating Systems:** Basic understanding of Computer Networking and Linux

SKILLS

- Problem-Solving & Analytical Thinking
- Efficient time management
- Strong teamwork and collaboration
- Effective Communication Skills
- Leadership skills and initiative
- Attention to detail
- Continuous self learning

EDUCATION

2022 - 2026

B-Tech Computer Science And Engineering

Al azhar college of engineering and technology
